KAM Animal Services, was developed for just this purpose.

KAM Animal Services has been working on producing this product for now but never finalized the ingredients. However, recently when more clients approached the company about creating a product that protect horses against environmental toxins the staff began the necessary research. They wanted to find the right combination of ingredients that work well together to detoxify toxic horses. KAM DTX-Formula is the result of that research.

"As a horse owner myself, I was also concerned with giving my horse product that would be a complete environmental body detoxification solution," explained Gabriele Sutton, owner of KAM Animal Services. She worked closely with the researchers to ensure KAM DTX-Formula has the right ingredients to get the best results. KAM DTX-Formula has turned out to be everything I was hoping for."

With already a lot of environmental toxins in the air, it's important to protect your horse from environmental toxins. KAM DTX-Formula is a natural, non-toxic, man-made product that helps your horse's body become more resistant to environmental toxins. It's a natural detoxifier that helps your horse's body become more resistant to environmental toxins. It's a natural detoxifier that helps your horse's body become more resistant to environmental toxins.

KAM DTX-Formula has a spectrum of ingredients that reach into the systemic cellular structures of the equine body. It gently promotes detoxification of the excretion organs and tissues of toxins that may accumulate over time. By doing so it safely promotes the removal of toxins caused from environmental exposure without creating additional stress on the horse.

It goes without saying that toxins can be dangerous because some of them may be carcinogenic. Accumulation of toxins and recurrent exposure may cause the body's immune, cellular, and organ functions to be compromised. If that happens it would reduce the body's own ability to effectively detox.

Through specific nutrients, KAM DTX-Formula restores the pathways of excretion and nourishes the body to re-build, balance and repair. Just like people, horses should also undergo a consistent detoxification protocol because they too are constantly facing issues from the environment that should cause us concern.

KAM DTX-Formula can be used both preventively and rotationally to reduce environmental toxin build-up, as well as to detoxify the equine body in a safe, gentle and effective way. Its Guaranteed Analysis includes: Crude Protein minimum 9%, Crude fat 2%, Crude fiber max 18%, Calcium minimum .5%, Calcium max 1%, Phosphorous minimum Zinc minimum 200 ppm, and Vitamin A minimum 2000 IU/lb. It can be combined in feed or fed as a treat, one scoop per day. A six pound bucket will last two months and costs \$225.

For more details go to www.kamanimalservices.com and click on the Therapeutic Supplements link and then the "detox" link. KAM's "Equine Learning Circle" will be expanding on this topic and others in its FREE monthly webinars. Just click on the webinars link to sign up for one of their upcoming free webinars, where your questions are welcome.
