

Be Proactive Against Radioactive Fallout and Environmental Toxicity to Protect Your Horse

By [Dr. John Hanover](#) Co-Author: *Gabriele Sutton*

We don't know if we will be physically affected by the after effects of the tsunami that hit Japan. But let's face it; the world is talking about radiation. Radioactive fallout is a buzz phrase these days. Hopefully, it won't be something we ever have to worry about but there are steps that can be taken to help protect our horses.

Even before the radioactive fallout buzz began, it was clear that horses need to be protected against environmental toxins. The combination of man-made pollutants, contaminated feeds and water, and natural stress, such as storms or draught, result in their bodies becoming toxic. So, it's not just radiation that can create toxicity in horses but so many other environmental situations.

Environmental toxicity warrants research to find the right combination of ingredients to detoxify toxic horses. It's not easy to find just the right balance that will be gentle and yet good enough to ensure the horse's immune system is strengthened.

The goal when detoxifying horses is for the product to have a spectrum of ingredients that reach into the systemic cellular structures of the equine body. You want to gently promote detoxification of the excretion organs and tissues of toxins that may accumulate over time. By doing so you safely promote the removal of toxins caused from environmental exposure without creating additional stress on the horse.

When doing your research to find the right product for you keep in mind what your goals are. You want to clean the body of any toxins but not so rapidly that it causes problems for the horse. Take it slow when detoxifying your horse. Keep in mind that just like humans, the horse's body is designed to detoxify itself so the healthier your horse is from the food and supplements you feed him, the greater the ability to help the detoxing process but sometimes the environment just creates too many toxins and that is when additional help is needed.

It goes without saying that toxins can be dangerous because some of them may be carcinogenic. Accumulation of toxins and recurrent exposure may cause the body's immune, cellular, and organ functions to be compromised. If that happens it would reduce the body's own ability to effectively detox.

Through specific nutrients, the right product restores the pathways of excretion and nourishes the body to re-build, balance and repair. While the current worry in many people's minds is the radioactive fallout, there are many other environmental threats that our horses face daily. Just like people, horses should also undergo a consistent detoxification protocol. Fears about radioactive fallout may have sped up the process but in reality our horses are constantly facing issues from the environment that should cause us concern.

Keep in mind when choosing a product that you want it to be used both preventively and rotationally to reduce environmental toxin build-up, as well as to detoxify the equine body in a safe, gentle and effective way.

Dr. John J. Hanover has practiced in the field of veterinary medicine since 1991. Dr. Hanover works with and writes for KAM Animal Services. He runs an integrated veterinary practice incorporating conventional medicine and complimentary holistic modalities.

KAM DTX-Formula, a new product recently created by KAM Animal Services, is the ideal product for detoxifying horses. KAM DTX-Formula can be used both preventively and rotationally to reduce environmental toxin build-up, as well as to detoxify the equine body in a safe, gentle and effective way. It's Guaranteed Analysis includes: For more details go to <http://www.kamanimalservices.com> and click on the Therapeutic Supplements link and then the "detox" link.
